PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer with 1+ years of experience architecting scalable web applications alongside developing secure RESTful APIs. Proficient in the MERN stack, TypeScript, Spring Boot, Python along with AWS cloud infrastructure. Demonstrated expertise in the Software Development Life Cycle (SDLC) through optimizing frontend performance by 30% while reducing backend latency. Strong algorithmic problem-solver (600+ LeetCode DSA) dedicated to engineering AI-integrated enterprise solutions using LangChain alongside Retrieval-Augmented Generation (RAG) to deliver high-impact user experiences.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript (ES6+), TypeScript, Python, C, Object-Oriented Programming (OOP)
- **Frontend Development:** React.js, HTML5, CSS3, TailwindCSS, Bootstrap, User Interface (UI) Design
- **Backend Development:** Spring Boot, Node.js, Express.js, FastAPI, RESTful API Architecture, Microservices
- **Cloud & DevOps:** AWS (Lambda, API Gateway, DynamoDB, CloudWatch), Docker, Jenkins, CI/CD Pipelines
- **Databases:** MySQL, MongoDB, DynamoDB, NoSQL, SQL, Database Architecture
- **AI & Machine Learning:** LangChain, Groq LLM, Retrieval-Augmented Generation (RAG), Vector Embeddings
- **Security & Tools:** JSON Web Tokens (JWT), Role-Based Access Control (RBAC), Git, GitHub, Postman, Agile Methodologies

PROFESSIONAL EXPERIENCE

Haskel AI

Feb 2025 - Feb 2026

Frontend Developer Intern | Remote

- Engineered 12+ highly reusable React.js components utilizing TypeScript alongside modern state management (Hooks, Context API) to optimize User Interface (UI) scalability, reducing redundant codebase by 25%.
- Architected 20+ secure RESTful API endpoints utilizing Node.js with TypeScript to enable dynamic content rendering, decreasing client-server communication latency by 15%.
- Spearheaded frontend performance optimization through advanced code-splitting alongside memoization techniques, accelerating page load speeds by 20% to enhance user retention.
- Partnered with cross-functional Agile teams to define technical API contracts, accelerating the feature delivery life cycle by 30% across 4 major production sprints.

TECHNICAL PROJECTS

ShopMind AI (Intelligent Inventory Assistant)

Jan 2026

AI Software Engineer

- Spearheaded the architecture of an AI-driven inventory backend leveraging Python, FastAPI alongside LangChain to process complex natural language queries, achieving 95% intent recognition accuracy.
- Integrated Groq LLM while designing a secure AI service layer utilizing strict prompt engineering to eliminate data hallucinations, securing database access for 100% of user queries.
- Programmed 8+ RESTful API endpoints with Pydantic validation alongside building a dynamic React.js interface, facilitating real-time product management for 500+ mock inventory items.

Core Technologies: Python, FastAPI, MongoDB, LangChain, Groq LLM, RAG, React.js, RESTful APIs

Resume-Doc (RAG-Powered AI QA Bot)

Jan 2026

AI Software Engineer

- Designed an end-to-end Retrieval-Augmented Generation (RAG) pipeline utilizing Python to parse complex resume documents, enabling context-aware question answering with 90% factual accuracy.
- Deployed a scalable conversational interface powered by LangChain, Groq LLM alongside vector embeddings to optimize semantic search relevance, reducing AI hallucinations by 40%.

Core Technologies: Python, FastAPI, LangChain, Groq LLM, RAG, Vector Embeddings, Semantic Search, React.js

Cityzen (Citizen Management System)

Jul 2025 - Aug 2025

Full Stack Developer

- Constructed a highly scalable microservices platform utilizing Spring Boot alongside React.js to support multiple user roles with secure data access.
- Implemented strict Role-Based Access Control (RBAC) via JSON Web Tokens (JWT) while developing 30+ RESTful APIs integrated with MongoDB along with MySQL databases.
- Automated CI/CD pipelines via Docker alongside Jenkins to streamline document processing deployments, maintaining 99.9% system uptime.

Core Technologies: React.js, Spring Boot, MongoDB, MySQL, Docker, Jenkins, JWT, RBAC, CI/CD, Microservices

Develop Your Skills (MERN E-Learning Platform)

Oct 2024

Freelance Full Stack Developer

- Programmed a microservices-driven e-learning platform utilizing the MERN stack alongside TypeScript to aggregate open-source educational content, engineering independently scalable APIs with optimized database queries.
- Designed a role-based React.js interface dynamically adapting features for distinct user profiles, containerizing backend services with Docker to enhance deployment efficiency by 40%.

Core Technologies: React.js, Node.js, Express.js, TypeScript, MongoDB, Docker, Microservices, RESTful APIs

EDUCATION

Karpagam College of Engineering

Aug 2022 - May 2026

B.Tech in Information Technology | CGPA: 7.6/10.0 | Coimbatore

SD Eaden Matric Higher Secondary School

2022

Higher Secondary Certificate (HSC) | Score: 85% | Vadalur

CERTIFICATIONS

- Wipro Java Full Stack Certification - Wipro TalentNext (Nov 2025)
- AWS Cloud Practitioner Essentials - Amazon Web Services (Nov 2025)
- Developing Back-End Apps with Node.js and Express - IBM/Coursera (Jun 2025)
- Advanced React & React - Meta/Coursera (Jan 2025, Aug 2024)
- Introduction to MongoDB - MongoDB University (Aug 2024)

ACHIEVEMENTS & AWARDS

- Best Project Award 2026:** Recognized for innovation, technical depth and real-world applicability among all final-year IT graduates at Karpagam College of Engineering.
- Algorithmic Proficiency:** Demonstrated strong problem decomposition and algorithmic thinking by solving 600+ Data Structures & Algorithms problems on LeetCode.
